Digital Literacy Project Report

Name: ASTHA SINGH

Registration Number: 25BCY10221

Branch: CSE IN CYBER SECURITY

Year: 1st Year

Course Code: CSE0001

Date: 30/03/2026

Introduction (100–150 words)

In today's digital age, technology plays a vital role in almost every aspect of our lives, especially in education. As students, we regularly use digital platforms for learning, communication, and collaboration. However, simply using technology is not enough; it is equally important to understand how to use it effectively, safely, and responsibly. This project is based on the concept of digital literacy, which helps students become confident and responsible digital citizens. Through this assignment, I have explored various tools, platforms, and practices that are essential for academic and professional growth. Each task in this project focuses on developing practical digital skills, such as creating an online presence, communicating professionally, and staying safe from cyber threats. Overall, this project has helped me understand the importance of using digital resources wisely in my academic journey.

Task 1 Write-up (150–200 words)

For this task, I created a digital literacy awareness infographic using Canva, which is an easy-to-use online design tool. The aim of my design was to clearly explain the concept of digital literacy and highlight its importance for students in a visually appealing way. In the infographic, I included key sections such as the definition of digital literacy, useful digital tools for students, safe internet practices, professional online presence, and email etiquette. I used simple icons, soft color themes, and structured sections to make the information easy to understand and engaging.

While designing the infographic, I found it interesting to explore how visual elements like icons and layout can make information more effective and attractive. However, one difficulty I faced was organizing all the content neatly within a single page without making it look crowded. Overall, this task helped me understand not only the importance of digital literacy but also how to present information creatively using digital tools.

Task 2 Write-up (150–200 words)

In this task, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. These platforms are widely used for academic and professional purposes. GitHub is mainly used to store and manage coding projects, while LinkedIn helps in building a professional network and showcasing educational details. Kaggle is useful for learning data science and practicing coding through datasets and notebooks.

While creating these profiles, I ensured that all the information was accurate and presented in a professional manner. This task helped me understand the importance of having an online presence in today's digital world. Over the next four years, I plan to actively use GitHub to upload my projects, LinkedIn to connect with professionals and explore opportunities, and Kaggle to improve my problem-solving and analytical skills. Overall, this task was very useful in preparing me for future academic and career growth.

Task 3 Write-up (150–200 words)

In this task, I explored both coding and collaboration platforms, which are essential for students in their academic journey. For the coding part, I used HackerRank and completed a beginner-level problem. This experience helped me understand how coding platforms work and how logical thinking is applied to solve problems. It also gave me confidence to start practicing programming regularly.

For the collaboration part, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions related to digital literacy. I also linked the form to a Google Sheet to collect and analyze responses. This helped me understand how online tools can be used for conducting quizzes and managing data efficiently.

One interesting aspect of this task was learning how easily surveys and quizzes can be created and shared using Google Forms. Initially, I found it slightly challenging to connect the form with the response sheet, but I was able to understand it with practice. Overall, this task helped me develop practical skills that will be useful in my academic and professional growth.

Task 4 Write-up (150–200 words)

In this task, I learned the importance of professional communication and online etiquette. I wrote two emails, one requesting an assignment extension and another applying for an internship opportunity. This helped me understand how to structure emails properly using clear subject lines, polite language, and formal tone.

I also created a social media do's and don'ts checklist to promote responsible online behavior. A situation where poor digital communication can cause problems is when a student sends an informal or rude email to a professor, which may create a negative impression. This can be avoided by using proper greetings, respectful language, and clear communication.

Overall, this task helped me improve my professional communication skills and understand the importance of maintaining a positive digital presence.

Task 5 Write-up (150–200 words)

In this task, I explored the topic of cybercrime, specifically UPI fraud, which is very common in today's digital world. I learned how scammers trick people into sharing sensitive information or approving fraudulent payments. What surprised me the most was how easily people can fall into such traps due to lack of awareness.

While researching this topic, I realized the importance of being cautious while making online transactions. One habit I will personally change is that I will never click on unknown links or scan QR codes without verifying the source. I will also make sure not to share any confidential information like OTP or PIN with anyone.

Overall, this task helped me understand the risks associated with digital platforms and the importance of staying alert and informed.

Conclusion (100 words)

This Digital Literacy project has helped me understand the importance of using technology effectively, safely, and responsibly. Through different tasks, I learned how to create a digital presence, communicate professionally, and stay aware of online risks. I also explored useful platforms like GitHub, LinkedIn, and HackerRank, which will support my academic and career growth. The project improved my practical skills, such as designing, communication, and problem-solving. It also made me more confident in using digital tools. Overall, this project has been a valuable learning experience that will help me become a responsible and skilled digital citizen in the future.
